1. General Features

- The app will be built for Android and IOS, using Hybrid Development
- Deployable at Multi-Country & Multi-Company
- Multi-user with role based access control
- Facility to download reports to PDF or email or Air Print
- Master Database to be on the cloud. To be downloaded locally on mobile for faster access.
- Local version to be synchronized with Cloud Version all the time.
- Payment Gateway for online payments for subscription
- Refer & Earn

2. Development Standards

- App Name reservation
  - Domain, Android Playstore, IoS
- Screen Design Standards
  - Standard Font
  - Standard Screen Design
  - App Logo / PSPL Logo
  - How it works (?) section to display the transaction flow
  - Shadow Screens for helping the users
  - Screens to follow Color Themes. To start with single theme will be provided, which may later be developed in multi-theme option for user to choose from.
- Coding Standards
  - No Hard Coding anywhere in the App Source Code. Use Variables at Program Level. In case of repetitive usage, use a system table.
  - Wherever a Program is likely to have repetitive usage, create Procedures/Small Programs/Routines rather than coding again and again. It will make maintenance easier.
